

I totally support the ARRL's request for an additional amateur allocation. However, I strongly suggest that the Commission place restrictions on this proposed allocation similar to the restrictions on the 30m (10.1 -10.15 MHz) amateur allocation. The proposed allocation should be limited to 200w PEP and a defined CW/RTTY/Data sub-band should also be a part of the allocation. I would urge the Commission to expedite the approval of this new allocation. Thank you for your consideration.
